

## GENERAL DESCRIPTION

- Revo M has been specifically designed to be an Universal Unit
- RS485 Comm. MODBUS Protocol Standard
- Frontal Key Pad to configure the unit and to read V, I and Power
- Configurability via RS485, USB Port and frontal Key Pad
- Microprocessor based electronic circuit fully isolated from power
- Universal input signal: RS485, Pot, Analog and SSR
- Firing Mode: Zero Crossing and Burst Firing Mode with programmable cycle time
- Configurable Control Mode: V and VxI
- Heater Break alarm to diagnose partial or total load failure and Thyristor Short circuit
- Digital input configurable
- Fuse and Fuse Holder Standard
- Current transformer integrated in Fuse Holder
- Comply with EMC, cUL pending
- IP20 Protection
- Panel mounting

## TECHNICAL SPECIFICATION

<b>Voltage power supply</b>	From 24V to 480V Max (Std) or 600V on request		
<b>Voltage Frequency</b>	50 or 60 Hz no setting needed from 47 to 70 Hz		
<b>Nominal Current</b>	30A, 35A, 40A		
<b>Input Signal</b>	SSR (logic)	4:30Vdc	5mA Max (On ≥ 4Vdc Off ≤ 1Vdc);
	Voltage input	0:10Vdc	impedance 15 K ohm;
	Current input	0:20/4:20mA	impedance 100 Ohm;
<b>Digital input</b>	4:30V dc 5 mA Max (On > 4Vdc Off < 1Vdc)		
<b>Firing</b>	Burst Firing and Zero Crossing with possibility to set number of Burst and cycle time		
<b>Control Mode</b>	Voltage Current and Power selectable via frontal Key Pad, and RS485 or via Digital input to transfer from one control mode to another one to establish a control strategy.		
<b>Auxiliary Voltage Supply</b>	90:130Vac	8VA Max	
	170:265Vac	8VA Max	(Standard)
	230:345Vac	8VA Max	
	300:530Vac	8VA Max	(Standard)
	510:690Vac	8VA Max	
<b>Heater Break Alarm</b>	HB alarm setting on front unit or RS485 with possibility to set sensitivity. Relay output 0,5A at 110V		
<b>Mounting</b>	DIN RAIL Mounting or Panel Mounting		
<b>Operating Temperature</b>	40 °C without derating. Over this temperature see below derating curve		
<b>Storage temperature</b>	-25 °C to 70 °C Max		
<b>Altitude</b>	Over 1000 m of altitude reduce the nominal current of 2% for each 100m		
<b>Humidity</b>	From 5 to 95% without condense and ice		

## OPTION'S FEATURES AND SPECIAL DETAILS

### HEATER BREAK ALARM HB

#### ON FRONT CABINET

The Heater Break circuit diagnostic partial or total load failure. It reads load resistance with an internal voltage transducer and current transformer to calculate the resistance value  $V/I$ .

The Heater Break circuit is compensated for voltage fluctuation, in fact a voltage variation has no influence on resistance value because  $V/I$  ratio remain constant.

On this unit is possible to set the nominal resistance value and the alarm sensitivity.

HB alarm in addition diagnostic the thyristor in short circuit

A normally open contact gives the alarm condition and an indication of the alarm type appears on display.

### BURST FIRING BF

This firing is performed digitally within the thyristor unit at zero volts, producing no EMC interference. Analogue input is necessary for BF and the number of complete cycles must be specified for 50% power demand. This value can be between 1 and 255 complete cycles, determining the speed of firing. When 1 is specified, the firing mode becomes Single Cycle (SC).

### FIELD BUS MODULE

CD-RS Used to convert RS232 to RS422

TU-RS485-PDP Used to convert RS485 Modbus to Profibus DP

TU-RS485-ETH Used to convert RS485 Modbus to Ethernet

For more informations see "Field Bus Module" Bulletin

### POWER SCALING

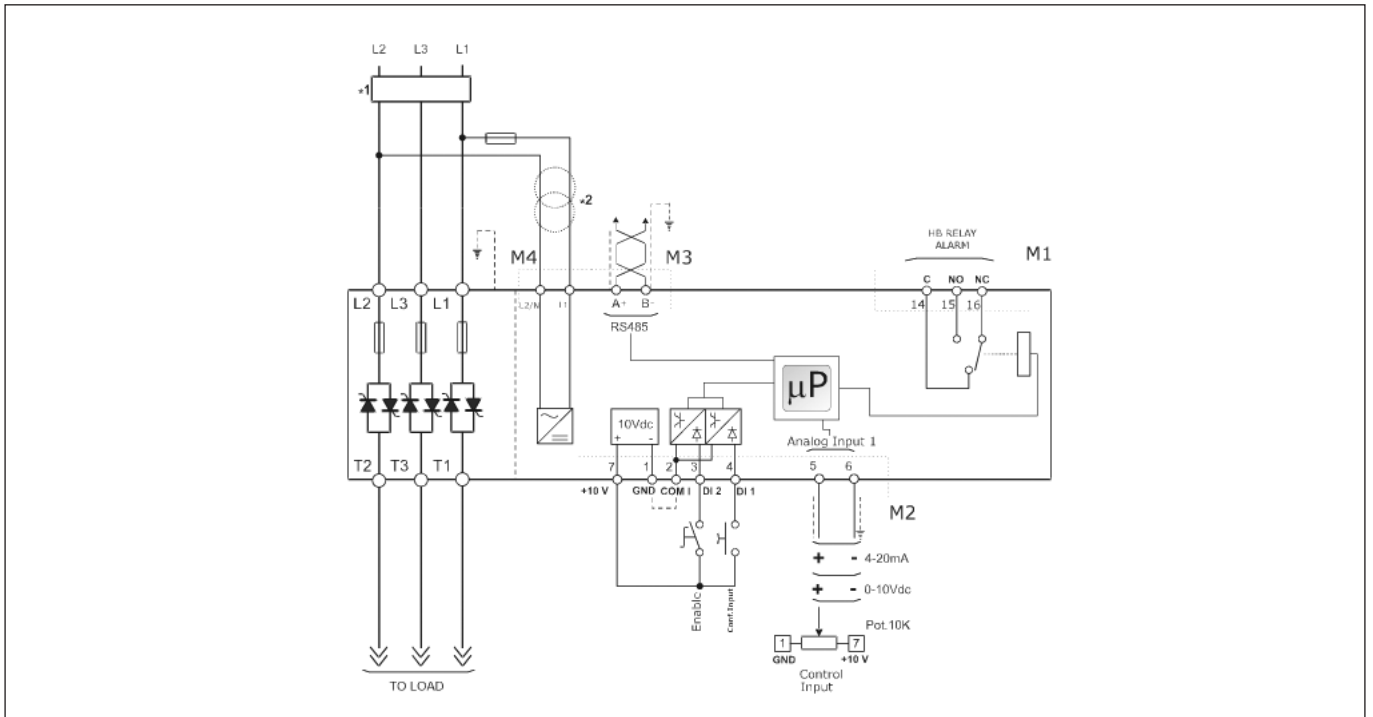

It's a scaling factor of the input command signal and limit the output of Thyristor unit. This parameter can be adjusted from 1 to 99% via RS485 or by the front of the unit. If this parameter is setted at 50% and the input signal is 100% the output become 50%. This feature is very useful to reduce the power when a zone has been oversized or when a temperature controller gives same reference to more unit along a furnace.

Imagine 3 zones with left and right one close to the door where in a continuous furnace the material come into and flow out. The profile of temperature along furnace is higher in central zone because there is less dispersion but if we scale its input we can have a flat profile.

### APPLICATIONS AND FOCUS ON:

- Infrared lamp.
- Fournaces.
- Petrochemical
- Dryers
- Pharmaceutical
- Autoclaves.
- Chemical
- Extrusion line.
- Climatic chambers

## WIRING CONNECTION REVO M 3PH from 30A to 40A

### LOAD TYPE

OPEN DELTA  
Resistive or  
Infrared Lamps  
Long and  
medium waves

### LOAD TYPE

STAR with neutral  
Resistive or  
Infrared Lamps  
Long and  
medium waves

### NOTE

- The user installation must be protected by electromagnetic circuit breaker or by fuse isolator. The Fuse I<sub>2t</sub> should be 20% less than I<sub>2t</sub> of power controller. Semiconductor fuses are classified for UL as supplementar protection for semiconductor. They are note approved for branch circuit protection.
- The auxiliary voltage supply of the Revo M unit must be synchronized with loadvoltage power supply. If the Auxiliary Voltage (written on the identification label) is different from Supply Voltage (to the load), use an external transformer as designated.

## DIMENSION AND FIXING HOLES

SR11 W 144 mm. - H 121mm. - D 185mm. - kg. 2,4

30A ÷ 45A

## OUTPUT FEATURES (POWER DEVICE)

Nominal current in continuous service:	30 - 35 - 40A
Max peak current (10ms)	400A for unit type 030 600A for unit type 035 800A for unit type 040 24÷600V
Voltage range:	480V; 600V
Repetitive peak reverse voltage:	1200V (480V), 1600V (600V)
Latching current:	15mA eff
Leakage current:	15mA eff
I <sub>t</sub> value tp=10msec:	780A <sup>2</sup> /S for unit type 030 1750A <sup>2</sup> /S for unit type 035 3110A <sup>2</sup> /S for unit type 040
Frequency range:	47÷70Hz
Power loss (I=I <sub>nom</sub> ):	114W for unit type 030 135W for unit type 035 150W for unit type 040
Isolation Voltage:	2500Vac
